

AI Assistants & Prompting

Gemini, ChatGPT, Claude · Equigrow short notes

Use them to learn, not to copy

- Ask for explanations, hints and step-by-step reasoning; then write the code yourself.
- Check important facts and code: assistants can be confidently wrong.

A good prompt has

- **Role:** You are a patient tutor for first-year students.
- **Task:** Explain pointers in C.
- **Context:** I understand variables and arrays.
- **Format:** under 150 words, one example, one practice question.

Prompts that help students

Explain ____ like I am new to it, then give a real-world example.
Here is my code and the error. Give me a hint, not the full fix.
Quiz me with 5 questions on ____, one at a time.
Review my resume bullet points and make them specific and measurable.

For developers

- Ask for JSON output when building apps; validate it.
- Keep API keys secret (environment variables), never in front-end code or GitHub.
