

Flutter & Dart

One codebase for Android and iOS · Equigrow short notes

Dart basics

```
var name = 'Asha';    final branch = 'CSE';    int age = 18;
String greet(String n) => 'Hi $n';
List<int> nums = [1, 2, 3];  Map<String, int> marks = {'maths': 90};
```

Widgets

```
class Counter extends StatefulWidget {
  @override State<Counter> createState() => _CounterState();
}
class _CounterState extends State<Counter> {
  int count = 0;
  @override Widget build(BuildContext context) => ElevatedButton(
    onPressed: () => setState(() => count++),
    child: Text('Clicked $count'),
  );
}
```

- Everything is a widget. **Stateless** widgets never change; **Stateful** ones call `setState` to redraw.

Layout

- Column (vertical), Row (horizontal), Stack (on top), Expanded (fill space), Padding, ListView for scrolling lists.
- Navigation: `Navigator.push(context, MaterialPageRoute(builder: (_) => NextPage()))`.

Commands

```
flutter create my_app    flutter run    flutter build apk --release
```
