

GitHub Copilot

AI pair programmer, free for verified students · Equigrow short notes

Get it

- Apply for the GitHub Student Developer Pack with your college email, then enable Copilot.
- Install the Copilot extension in VS Code.

Use it well

- Write a clear comment first, e.g. `// function that checks if a string is a palindrome, then accept or edit the suggestion.`
- Use Copilot Chat to explain code, find bugs and write tests.
- Read every suggestion before accepting; you're still the one responsible for the code.

For learning

- While learning a topic, try solving it yourself first and use Copilot to review your solution.
