

HTML & CSS

Build and style web pages · Equigrow short notes

HTML skeleton

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="utf-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>My page</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
  <header><h1>Hi, I'm Asha</h1></header>
  <main><p>Welcome!</p><a href="projects.html">Projects</a></main>
</body>
</html>
```

Use semantic tags (header, nav, main, section, footer): they help accessibility and SEO.

CSS basics

```
h1 { color: #333; font-size: 2rem; }
.card { padding: 16px; border-radius: 12px; }
#hero { margin: 0 auto; max-width: 960px; }
```

Box model: content → padding → border → margin. Add `* { box-sizing: border-box; }` so width includes padding and border.

Flexbox & Grid

```
.row { display: flex; gap: 12px; justify-content: space-between; align-items: center; }
.grid { display: grid; grid-template-columns: repeat(3, 1fr); gap: 16px; }
```

Flexbox = one direction (a row or a column). Grid = rows and columns together.

Responsive design

```
@media (max-width: 600px) {
  .grid { grid-template-columns: 1fr; }
}
```

- Design mobile-first, use rem/%, and give images max-width: 100%.
