

Kotlin

Google's recommended language for Android · Equigrow short notes

Basics

```
val name = "Asha"           // read-only
var count = 0               // can change
fun square(x: Int): Int = x * x
val nums = listOf(1, 2, 3)
val doubled = nums.map { it * 2 }
for (i in 1..5) println(i)
```

Null safety

```
var email: String? = null    // ? means it can be null
println(email?.length ?: 0)  // safe call and default value
```

Classes

```
data class Student(val name: String, val cgpa: Double) // equals/toString for free
val s = Student("Asha", 8.9)
```

Android

- Modern Android UI uses **Jetpack Compose**: UI written as Kotlin functions marked `@Composable`.
- Use Android Studio; start with the official Compose tutorials.
